

FAQ

OVERVIEW

What is the High Reliability Schools™ framework?

Based on 40 years of research, the Marzano High Reliability Schools (HRS) framework serves as a long-term strategic planning guide for schools and districts. Rather than constantly seeking new initiatives, the framework encourages educators to concentrate their efforts on five key areas of operation:

1. Safe, Supportive, and Collaborative Culture
2. Effective Teaching in Every Classroom
3. Guaranteed and Viable Curriculum
4. Standards-Referenced Reporting
5. Competency-Based Education

Why become a certified high reliability school?

Marzano Research offers formal certification for schools or districts that want to attain one or more levels of high reliability. Each level has specific tangible benefits that will significantly improve school effectiveness and student achievement. Schools and districts use certification as a way to celebrate and officially document the work they have accomplished.

Included with certification:

- An HRS award certificate
- A Marzano Research press release
- A digital HRS logo to use on your website and social media accounts
- Your school's or district's logo featured on the Marzano Research website
- An HRS certified school name badge at the annual HRS Summit
- Your school's or district's name included in HRS Summit materials
- An award presented at the HRS Summit (districts only)

See the Certification Section below for more information.

What are leading and lagging indicators?

In order to measure success at each level, school leaders must select leading and lagging indicators that are appropriate for their schools.

Leading indicators show what a school should work on to achieve a high reliability level. Example of a leading indicator: the faculty and staff perceive the school environment as safe and orderly.

Lagging indicators are the evidence a school gives—such as pictures, videos, or data sets—to validate its achievement of a high reliability level, particularly in areas where there is general agreement that the school should improve. Example of a lagging indicator: one or no incidents occur each year in which student safety is compromised.

FAQ

What is an HRS Survey Report?

An HRS Survey Report summarizes the results of the HRS surveys administered within a school/district. The report breaks down each leading indicator score and provides data analysis for the collected survey data. This report will give a mean, median, and standard deviation for each leading indicator. The report will provide key findings that show which indicators are strengths and weaknesses within the school/district.

What is the High Reliability Schools Survey Coaching Webinar?

During the High Reliability Schools Survey Coaching Webinar, a Marzano Research associate discusses survey results, lagging indicators, quick data, and proposed next steps with a school or district. The webinar will be approximately 90 minutes in length and can be purchased through the Marzano Research website.

What is the difference between the High Reliability Schools Survey Coaching Webinar and a High Reliability Schools Certification Webinar?

The Survey Coaching Webinar provides support/suggestions on how to create growth plans based on the leading indicator scores on the survey report. The HRS Certification Webinar doesn't help create growth plans but rather focuses on the school's achievement within each indicator.

What is the High Reliability Schools Network?

The HRS Network is a community of nearly one thousand schools and districts across North America and around the world. Members have access to a secure portal on the Marzano Research website where they can access resources and artifacts specific to the HRS level on which they are working.

How can my school or district become a member of the High Reliability Schools Network?

Any school or district that purchases HRS professional development or an HRS product will receive credentials to log in to and become a member of the HRS Network.

CERTIFICATION

How can a school receive HRS certification?

Schools can receive HRS certification in one of three ways:

1. Moodle Certification
2. On-Site Professional Development
3. Webinar

What does the certification process look like?

The certification process begins by surveying teachers and administrators (student and parent surveys can also be administered for more comprehensive data).

The survey results are aggregated, and reports are shared with the school. The results are in correspondence to each leading indicator. Schools must see success on each leading indicator within a level in order to be eligible for certification at that level.

FAQ

What does the certification process look like? cont.

If a school has leading indicators that don't meet the accepted level, lagging indicators are used as evidence to determine growth.

The school will identify lagging indicators and collect data to monitor progress. During this phase, the school will have a leading and lagging indicator review session as well as an observation and discussion visit with a certification associate. Once the requirements for each lagging indicator have been met, the school will achieve high reliability status for that level.

The school will need to collect quick data on a regular basis (e.g., monthly) to ensure continual progress.

Who determines certification?

Certification is determined by a Marzano Research certification associate on the basis of HRS surveys, data collection, and data analysis.

Can I skip a level of certification?

No, achieving high reliability status should be done methodically and systematically, level by level, starting at Level 1.

What if my school is already highly effective at a certain level?

Schools that are already operating at high reliability status for a given level will be able to identify lagging indicators and criterion scores, confirm their perceptions, and attain certification in a quick and efficient manner.

What if my school doesn't meet the requirements for certification?

If a school does not meet the requirements for certification, the school is required to create and submit a written plan outlining how the identified issues will be addressed. The school can submit data or artifacts digitally to show they have enacted the plan and made the final improvements necessary for certification in a given level. The HRS certification associate will review the materials and determine whether or not to recommend certification.

Can a school/district obtain High Reliability Schools certification without using the HRS survey/report?

Yes, a school or district may obtain certification by completing its own survey/report using the survey listed in A Handbook for High Reliability Schools. The school or district may use the survey results to guide their work toward certification. They may also wish to have a Survey Coaching Webinar to receive guidance along the way. For certification, the school or district should contact Marzano Research.

Our school is already listed on AllThingsPLC.info; will we automatically qualify for Level 1 certification?

No, a school must complete and pass HRS certification expectations to become certified.

How long is certification valid?

Certification is valid for five years. If a school is no longer actively focused on the work of High Reliability Schools at the end of five years, certification is lost.

FAQ

How long is certification valid? cont.

Schools may continue on their certification journey by:

- Applying for the next level of certification and having a review of current lagging indicators within five years of the last certification.
- Continuing to meet certification criteria at a given level after five years.

When does district certification occur?

District certification can be achieved in one of two ways:

- All schools within the district are certified at the same HRS level.
- All schools within a district unit/segment are certified at the same HRS level.

The HRS Summit

Why should I attend the High Reliability Schools Summit?

The HRS Summit explores and dives deeper into the five levels of the HRS framework. Leading HRS experts share insights, strategies, and tools for each level, and participants leave with implementation plans they can take back to their schools. The event is also an excellent opportunity to connect and collaborate with other HRS-certified schools and districts.

Will my school be recognized during the High Reliability Schools Summit?

If your school has achieved certification since the previous summit, your school name will be shown in the HRS Summit materials as well as during a special portion of the event. If your district achieved certification during this time period, you will be presented with an award during the summit.
